

Asian and Pacific Islander Health Assessment

EXECUTIVE SUMMARY

Santa Clara County
2017

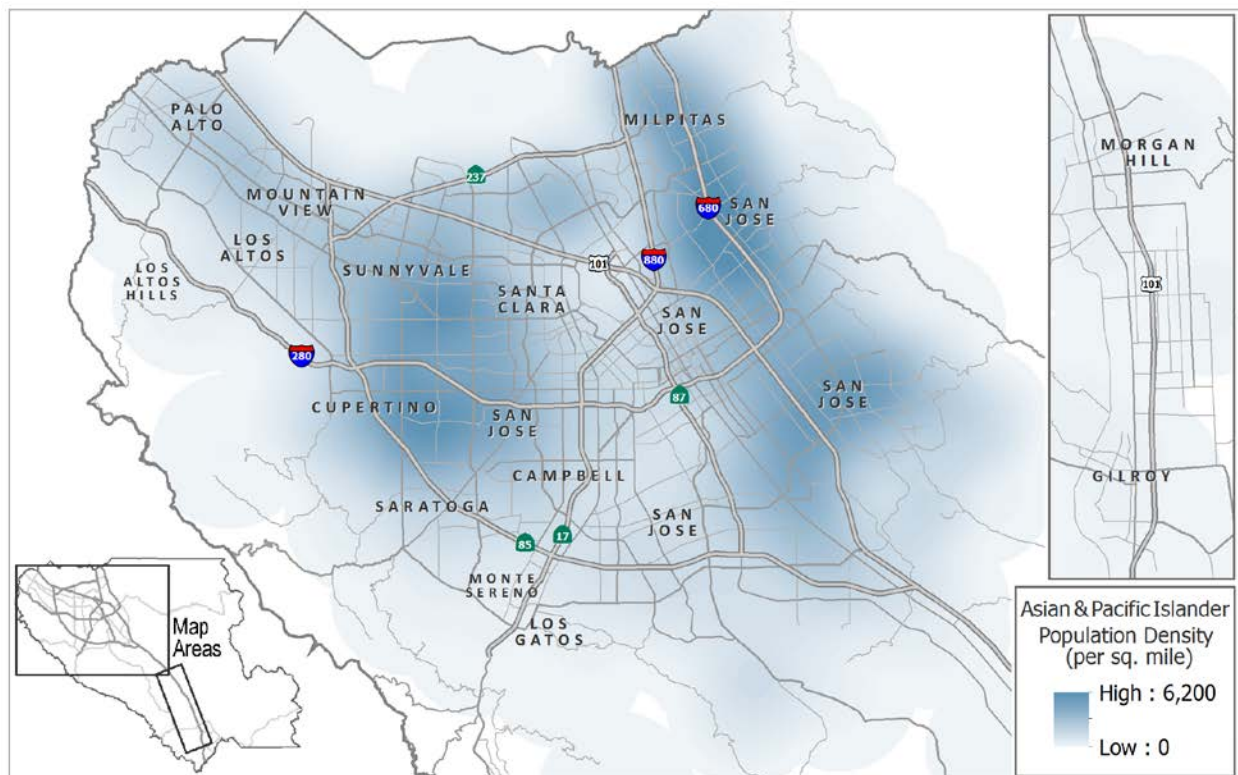

EXECUTIVE SUMMARY

The following document summarizes the key data findings of the Asian/Pacific Islander Health Assessment report by Asian subgroups (Asian Indian, Chinese, Filipino, Japanese, Korean and Vietnamese), and Hawaiian and Pacific Islander group (referred to as Pacific Islander group in the document). The key findings include demographic highlights, health disparities and population distribution by subgroups. This information is vital for identifying salient issues and supporting community outreach and engagement. This information may also help in targeting resources for specific Asian/Pacific Islander subgroups.

Asian/Pacific Islanders comprise more than a third of Santa Clara County's population. Even though Asian/Pacific Islanders overall tend to experience better health outcomes than other racial/ethnic groups, noteworthy disparities exist in the health outcomes and health risk behaviors when data are parsed by Asian/Pacific Islander subgroups.

The Asian/Pacific Islander population is integrally present in most of the cities in the county, however, geographical distribution of specific Asian/Pacific Islander subgroups shows segmented population distribution. This information is relevant for addressing the subgroup-specific needs at a community level in order to achieve the goal of health for all.

CHINESE KEY FINDINGS

A higher percentage of Chinese reside in areas near City of Cupertino.

- Chinese represent the largest Asian subgroup residing in the county; accounting for over 1 in 4 Asians (27%).
- Sixteen percent (16%) of Chinese seniors ages 65 years and older are living under 100% Federal Poverty Level.
- Chinese have the highest percentage of owner-occupied housing units (70%) compared to other Asian/Pacific Islander subgroups.
- Among Asian/Pacific Islander middle and high school students, Chinese have the lowest percentage of overweight or obese students (15%).
- More than 4 in 10 Chinese ages 5 years and older (41%) do not speak English 'very well'.
- More than 1 in 3 Chinese survey respondents (34%) reported having a hard time understanding the doctor and needed someone to help them understand the doctor.
- Life expectancy at birth among Chinese residents is 90.5 years; the second highest among Asian/Pacific Islander subgroups.

Filipino population distribution, Santa Clara County

Source: U.S. Census Bureau, 2010-2014 American Community Survey 5-year estimates.

FILIPINO KEY FINDINGS

The majority of Filipinos reside in the eastern parts of the county – City of Milpitas and eastern parts of City of San Jose.

- A lower percentage of Filipino children ages 3 and 4 years (43%) are enrolled in a preschool compared to other Asian subgroups.
- High school graduation rate among Filipino students increased from 89% in 2011-12 to 93% in 2015-16 school year.
- Among the Asian/Pacific Islander subgroups, Filipino mothers have the highest preterm birth rate (11 per 100 births).
- Filipino survey respondents reported the highest percentage of binge drinking 1 or more times in the past 30 days (29%).
- Tuberculosis case rate is highest among Filipinos (45.1 cases per 100,000 people).
- Among Asian/Pacific Islander subgroups, Filipinos have the highest age-adjusted all-sites cancer incidence rate of 353.3 cases per 100,000 people.
- Among the Asian/Pacific Islander middle and high school students, Filipinos reported the highest percentages of students feeling sad or hopeless for 2 weeks or more (37%); and students who seriously considered attempting suicide in the past 12 months (21%).
